                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.html

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* Totalia/Carlifers

* 1 231241: contig of 231241 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the clone and there may be sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         table

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1

RP11-263X19 is from the library RPCI-11.1 constructed by the group of pierer de Jong For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AC148047

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9 CACGGGGCACTCCCGTGGTTCCTGGACTCTGGCCCCCAGTGTA 51
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Strepsirhini; Galagonidae; Otolemur 1 (bases 1 to 192549)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (18-MAR-2004) NIH Intramural Sequencing Center, 8717 Grovemont Circle, Gaithersburg, MD 20877, USA On Mar 18, 2004 this sequence version replaced gi:41386816.

It currently consists of 7 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 * This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 18809 18908: contig of 18808 bp in length

* 18909 22119: contig of 3211 bp in length

* 22120 2219: gap of unknown length

* 22220 31750: contig of 9531 bp in length

* 31751 31850: gap of unknown length

* 31851 53063: contig of 9531 bp in length

* 53164 95718: contig of 21213 bp in length

* 53164 95718: contig of 42555 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequencing vector: plasmid; n/a; 100% of reads Chemistry: Dye-terminator Big Dye; 100% of reads Assembly program: Phrap; version 0.990319

                                                                                                                                   The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8x average.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         37;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antonellis, A., Ayele, K., Benjamin, B., Blakesley, R.W., Bouffard, G.G., Brinkley, C., Brooks, S., Chu, G., Coleman, B., Coleman, B., Daki, N., Bigle, J., Granite, S., Guan, X., Gupta, J., Coleman, P., Daki, N., Hansen, N., Ho, S.-L., Hu, P., Hurle, B., Haghighi, P., Han, J., Hansen, N., Ho, S.-L., Hu, P., Hurle, B., Idol, J.R., Jones, C., Karlins, E., Kim, H., Kwong, P., Laric, P., Larson, S., Lee-Lin, S.-Q., Legaspi, R., Maduro, Q.L., Maduro, V.B., Margulies, E.H., Maslello, C., Maskeri, B., McDowell, J., Margulies, E.H., Maslello, C., Maskeri, B., McDowell, J., Margulies, P., Schandler, K., Sison, C., Stantripop, S., Thomas, J.W., Thomas, P.J., Tsipouri, V., Vogt, J.L., Stantripop, S., Thomas, J.W., Thomas, P.J., Tsipouri, V., Vogt, J.L., Nick, Company, A. and Green, E.D.
                                           coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (18-MAR-2004) NIH Intramural Sequencing Center, 8717 Grovemont Circle, Gaithersburg, MD 20877, USA On Mar 18, 2004 this sequence version replaced gi:41058180.

                                                                                                                       The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in O20 bases and has been reviewed to rule out gross misssemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antonellis, A., Ayele, K., Benjamin, B., Blakesley, R.W.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

1st strand cDNA was primed with a NotI-oligo(dT) primer: Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library

New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insuliver cells. ingulin 'n

Claim 7; Page 13; 37pp; English.

The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like gr growth

The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. stimulation of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat glucose response element of the invention

Preferably, the expression signal is derived from the 183 k region located 5' of the type L pyruvate kinase (L-PK) gene, especiall having the present sequence. Expression of the recombinant virus can k controlled by glucose levels, but insulin production can be stopped immediately by administering glucagon. This avoids the risk of hypoglycaemia caused by excessive insulin production. Mammalian cells infected by the virus can be implanted into liver, spleen, pancreas or intestine, to provide insulin secretion at predetermined sites. The virus full is provided insulin secretion at predetermined sites. The virus can be implanted into liver, spleen, pancreas or intestine, to provide insulin secretion at predetermined sites. The virus can be stopped to the virus can be implanted into liver, spleen, pancreas or intestine, to provide insulin secretion at predetermined sites. The virus can be stopped to the virus can be implanted into liver.

The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence
The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glucose response element; GIRE; liver pyruvate kinase; LPK; ds; IGFBP-Insulin-sensitive element; ISE; basal promoter; hyperglycaemia; insuliinsulin-like growth factor binding protein-1; hypoglycaemia; glucose; fat catabolism; protein catabolism; carbohydrate; glucocorticoid; rat;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              glucagon; euglycaemia; diabetes; fasting; ketogenesis; ketoacidosis; hepatocyte; hepatoma; cellular protein degradation; antidiabetic; intracellular hormone receptor; insulin regulator construct; anaboli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABX15374;

```

The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Glucose response element; GIRE; liver pyruvate kinase; LPK; ds; IGFBI insulin-sensitive element; ISE; basal prometer; hyperglycaemia; insulin-like growth factor binding protein-1; hypoglycaemia; glucose; fat catabolism; protein catabolism; carbohydrate; glucocorticoid; rat glucagon; euglycaemia; diabetes; fasting; ketogenesis; ketoacidosis; hepatoma; cellular protein degradation; antidiabetic;

                               to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), tincrease fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other
                                                                                                                                                 The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth factor binding protein-1 (GFBP-1) basal promoter. The construct is used
                                                                                                                                                                                                                                                                                                               Claim 9;
                                                                                                                                                                                                                                                                                                                                                                                                 New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Glucose response element; GIRE; liver pyruvate kinase; LPK; ds; IGFBP-1; insulin-sensitive element; ISE; basal promoter; hyperglycaemia; insulin; insulin-like growth factor binding protein-1; hypoglycaemia; glucose; fat catabolism; protein catabolism; carbohydrate; glucocorticoid; rat;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors.                                                                                 This DNA encodes a Rattus norvegicus cytosolic pyruvate kinase. The storage lipid content of a seed is increased by reducing the activity endogenous cytosolic pyruvate kinase in the seed. This is applied to plants which accumulate storage procein and lipid in the embryo, particularly an oilseed plant such as soya, sunflower, sesame or especially rapeseed. Inhibitory enzymes involved in amino acid biosynthesis increases production of lipid by directing more of the precursor to the chloroplast
                                                                                                                                                                                                                                                                                                                                                        exon

RESULT 8

tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising at least part of the data information given in the specification. The methods are useful for predicting at least one toxic effect of a compound, predicting the renal toxicity of a toxic effect of a compound, predicting the renal toxicity of a compound, or identifying toxicity markers in tissues or cells exposed to known renal toxin. The genes are useful as toxicity markers in drug screening and toxicity assays, in monitoring disease physiological states, or disease progression. This polynucleotide represents a rat DNA sequence relating to the toxic effect database

The invention relates to a novel effect of a compound. The method

method of predicting at least one toxic comprises a gene expression profile of a

                                                                         CC The invention relates to a method of predicting (the progression of) a CC toxic effect of a compound by preparing a gene expression profile of a CC kidney tissue or cell sample exposed to the compound and comparing the CC gene expression profile to a database, or detecting the level of gene (s) CC expression in a tissue or cell sample exposed to the compound, where CC differential gene expression). The method is useful for predicting (the progression of) at least one toxic effect of a compound. The genes are CC useful as toxicity progression). The method is useful for predicting (the progression of) at least one toxic effect of a compound. The genes are CC useful as toxicity markers in drug screening and toxicity assays. The CC useful as toxicity markers in drug screening and toxicity assays. The CC useful for predicting the likelihood that a compound or test agent will induce various specific kidney pathologies, such as nephritis, CC kidney necrosis, glomerular and tubular injury, or focal segmental CC glomerulosclerosis. The methods are useful for determining the similarity of a toxic response to one or more individual compounds and for CC predicting or elucidating the potential cellular pathways influenced, CC induced or modulated by the compound or test agent. The kit is useful for predicting the progression of renal disease states, for identifying genes CC that show promise as new drug targets and for screening knew and newly the states of the compound or test compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ś

0,
           The invention relates to an insulin regulator construct comprising a CG glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC gromoter and an insulin-sensitive element (GSE) of an insulin-like growth CC factor binding protein-1 (IGFBP-1) basal promoter. The construct is used CC to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to CC increase fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, CC thus inhibiting the long-term complications of diabetes. The properties CC of the construct are essentially specific for hepatocytes and well-CC differentiated hepatoma lines and insulin expression in these cells may constitute the construct are essentially specific for hepatocytes and well-CC differentiated hepatoma lines and insulin expression in these cells may constitute the construct are essentially specific for hepatocytes and well-CC differentiated hepatoma lines and insulin expression in these cells may constitute of of other intracellular hormone receptors. This sequence represents a fragment of the rat liver pyruvate kinase glucose response cc element, used in production of the construct of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGPBP-1) basal promoter. The construct is used CC to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to CC increase fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly englycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC in diabetics during short-term fasting, large carbohydrate loads or when CC thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-cc differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. chimbition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a fragment of the rat liver pyruvate kinase glucose response element, used in production of the construct of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁

                                                                                                                                  The invention relates to a method of modulation of expression of a DNA molecule (preferably inhibition of lipogenesis or glycolysis) that encodes a protein involved in glucose metabolism or lipogenesis in a cel which comprises contacting the cell with an agent that induces phosphorylation or dephosphorylation of carbohydrate response element binding protein (ChREBP). The method is useful for treating obesity, diabetes or vascular disease and modulating carbohydrate metabolism, for inhibiting lipogenesis or glycolysis and modulating expression of a DNA molecule that encodes a protein involved in glucose metabolism or lipogenesis in a cell (e.g. human liver cell) and for treating cardiac disease. The present sequence represents an oligonucleotide used in the purification of ChREBP

                                                                                                                                                                                                                                                                                                                                                                          molecule (preferably inhibition of lipogenesis or glycolysis) that encodes a protein involved in glucose metabolism or lipogenesis in a cell which comprises contacting the cell with an agent that induces phosphorylation or dephosphorylation of carbohydrate response element binding protein (Chribb). The method is useful for treating obesity, diabetes or vascular disease and modulating carbohydrate metabolism, for inhibiting lipogenesis or glycolysis and modulating expression of a DNA molecule that encodes a protein involved in glucose metabolism or lipogenesis in a cell (e.g. human liver cell) and for treating cardiac disease. The present sequence represents a L-pyruvate kinase carbohydrate response element.

The method is useful for treating obesity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diabetes or vascular disease and modulating carbohydrate metabolism, for inhibiting lipogenesis or glycolysis and modulating expression of a DNA molecule that encodes a protein involved in glucose metabolism or lipogenesis in a cell (e.g. human liver cell) and for treating cardiac disease. The present sequence represents a L-pyruvate kinase carbohydrate
                                                                                                                                                          carbohydrate response element binding protein; ChREBP; obesity; diabetes; vascular disease; carbohydrate metabolism; cardiac disease; gel shift assay.
